3-Mat System

- ## 1 Scrapper

 - Scrapes Heavy Debris
 - Your first defense against mud, dirt, and snow
 - Choose matting with a non-absorbent scraping surface, or open weave backing, to allow moisture to drain naturally
- ## 2 Scrapper/Wiper

 - Cleans & Absorbs Moisture
 - The workhorse of

The amount of dirt 1,000 people can track into a building in just 20 days?

24lbs

\$1 spent keeping soil out of a building will save \$10 in removing the soil once it's inside.

the system

- Designed to remove and contain soil, waste particles and moisture at the entrance

3 Wiper

- Absorbs Moisture & Dries
- Removes remaining moisture, fine fragments and dust from footwear upon entrance to the interior of building

Outdoor Matting

Dirt that is brought in on shoes can cause premature and visible wear and tear on expensive interior flooring — both hard surfaced and carpeted floors.

In addition, a lack of correct entry matting affects indoor air quality. An outdoor mat is there to knock off the big stuff and begin the dirt management process.

What to look for:

- Choose an aggressive mat with a surface designed and built for vigorous scraping.
- Quality outdoor mats can trap and hold as much as three pounds of dirt per square foot. Mats with this ability can actually reduce overall building cleaning costs
- Deep pile products hide dirt and prevent it from entering the building
- Consider choosing colors that efficiently conceal dirt, sand, salt, etc.

Indoor Matting Solutions

Scraper/Wiper mats are often viewed as the best overall matting available. Ideally used to transition between rugged external matting and internal finishing mats, they scrape off light soils and absorb and retain water and moisture. Scraper/Wipers are often used for internal entryways – between external and internal doors, or as the first of two internal entry mats.

Internal entry mats.

Wiper mats or "finishing" mats are best thought of as the final step in managing dirt and debris at the point of entry. The surface fibers pull off lingering dirt and dust, while absorbing and retaining water and wetness. Preventing the moisture from getting onto floors keeps them dry and safe. Wiper mats are also often used to support cleanliness throughout the building, such as outside of restrooms or kitchen and cafeteria entrances.

Ergonomic Mats

Ergonomic mats help ease leg, foot, and lower back fatigue and pain and can also assist in the areas of slip resistance, wet-area drainage, and worker safety.

Strong. Resilient. Safe.

Three critical matting features that can dramatically influence the success of your workforce and your business. Zedlan™ Foam was developed with these workplace imperatives in mind.

- Strong - Zedlan™ Foam outwears similar products by nearly 3-to-1
- Resilient - Zedlan™ Foam has three times the bounce of traditional ergonomic products
- Safe - combined with our exclusive slip resistant technology, Zedlan™ Foam offers superior traction compared to standard foam products

Zedlan™ Foam. Just one more way we support our customers by developing industry leading products that support their workforce.

Care and Maintenance

Use & Care Instructions – Entrance Matting

Regular maintenance of your mats is critical to extend mat life and appearance. It is recommended to follow a regular maintenance schedule. Frequency will depend on traffic and soil conditions.

INITIAL MAT USE

- 1| Within a few days of receipt, rolled mats should be unrolled and laid flat.
- 2| Normal shedding or "fuzzing" may occur with new carpet top mats. This will disappear after vacuuming.
- 3| Some rubber mats may have an oily or sticky film on them. This is a releasing agent that is inherent in molded mats, not a defect. Simply wash down with a mild detergent or degreaser to remove this film.
- 4| To store mats, roll them up and lay them in a cool area with moderate temperatures. Do not store in direct sunlight or crush.

PERIODIC INSPECTION

Periodic inspections are recommended on a regular basis to check for border tears. To repair a damaged border area, glue the section together with cyanoacrylate type (super glue) adhesive.

CARPET MATS AND HDNP PRODUCTS

Entrance mats are used to capture dirt and debris before it can be tracked into a facility. However, mats must be cleaned regularly to extend their useful life and appearance.

- 1| Vacuum daily
- 2| Hand wash or extract stains with a carpet spot cleaner, a water-based carpet detergent or shampoo.
- 3| Periodically clean the mat with a carpet extracter using a water-based detergent or shampoo. Do not use solvent-based cleaners.
- 4| Excess water is removed by extracting or hanging the mat. Let the mat dry completely before allowing traffic to resume.

IMPORTANT! Do not use rotary scrubbers or mechanical cleaners or scrubbers to clean.

Do not use solvents, pH detergents, or alkalis directly on the mat or use the mat in areas where these are used.
