by EARTH FRIENDLY PRODUCTS

Our sustainability goes above and beyond; we are a vertically green company, manufacturing our hardworking products in environmentally friendly ways. Earth Friendly Products' goal is to provide highly effective cleaners formulated with plant-derived cleaning agents for every application, priced at or below the cost of non-green cleaners.

Dedicated to staying ahead of our direct competitors, we bring creative, innovative solutions into the marketplace. We want you to feel confident that when using our products, they are honest, hardworking, sustainable cleaners, thoughtfully formulated for people just like you.

We came from Venus

1967

Earth Friendly Products is born

1989

A B R I E F

In 1967, Van Vlahakis founded Venus Laboratories, Inc. in Bensenville, IL, a bordering suburb of Chicago. Venus Labs specialized in both branded and private branded specialty chemicals for commercial applications. Van Vlahakis had emigrated from Greece, the birthplace of science, to Chicago where he attended Roosevelt University majoring in Chemistry. He personally formulated each product at Venus Labs, combining his extensive knowledge of modern chemistry with his Greek upbringing, where healthy living and respecting the environment were everyday priorities.

In the mid-1970s, Venus Laboratories had mastered industry "firsts" including the use of orange oil in 1975 and the use of enzymes by 1976. One of the most notable creations that boasts continued popularity is the UniTab® Urinal Screen & Block which earned a patent in 1971. The UniTab was the first leave-in urinal cleaner, maintainer and deodorizer created without using para-dichlorobenzene, a known carcinogen. By the late 1980's, Venus Laboratories had rapidly grown, showcasing over 250 different formulas. During that time, Venus became known for replacing toxic ingredients with much safer alternatives. In 2009, nearly 38 years after the development of the UniTab, the State of California became the first in the USA to ban the use of para-dichlorobenzene products. Many other states have done the same.

With so many successful 'firsts', Venus Labs continued growth was reflected in their expansion to four manufacturing plants across the USA and their blossoming presence in the international distribution channel.

In 1989, Earth Friendly Products was created as brand under the Venus Labs umbrella. Success under the Earth Friendly Products name came swiftly as key elements like sustainable, plant-derived ingredients and socially responsible business practices were implemented into the brand that would soon be coveted by eco and health-conscious consumers.

In the 1990's, key conventional grocery distributors joined the natural grocery channel's choice to include Earth Friendly Products in their collection of cleaners. As a result, by the early 2000's, Earth Friendly Products became one of the leading green brands. As the demand for green products grew, Venus Laboratories switched names to be Earth Friendly Products in 2007. Subsequently, the company's top-seller, ECOS laundry detergent, found its space on major box store shelves across the USA, Canada and Mexico.

As Earth Friendly Products continued to focus on perfecting its green technologies, ECOS laundry detergent became the top-selling environmentally friendly laundry detergent in the United States and the company was acclaimed for local awards and national achievements such as carbon neutrality, designation as an EPA Green Power Leader and more. The vertically green primary manufacturer boasts manufacturing centers in California, Florida, Illinois, New Jersey and Washington and holds its international sales office in Athens, Greece. As a leader in sustainable business practices, they have also retrofitted each facility to be eco-friendly and make their products using 100% renewable energy.

HISTORY

The Venus Laboratories commercial product offering was replaced in 2008 with what is now ECOS® Pro. More than 70 formulas are specifically blended for use in commercial applications either in ready-to-use or concentrated formulas. ECOS Pro products are sold through commercial distribution channels servicing janitorial, office, industrial, hardware and foodservice businesses.

Ensuring cleaner indoor air quality and an overall healthier environment, are factors that we consider when blending our formulas. Using sustainable ingredients that produce readily biodegradable cleaners which are pH balanced, free of dyes and formaldehyde is the best gift we could give to our customers and to their employees. Our environmentally conscious formulas are sealed with the EPA's Safer Choice program and the USDA's BioPreferred stamp of approval.

Today, consumers and distributors can rest assure that each bottle of Earth Friendly Products soap contains nearly 50 years of scientific passion and plant-derived goodness. The company that came from Venus cares just as much about what it leaves out of its products as what it puts in.

ECOS® Pro Promise:

- Positively free of formaldehyde and dyes - Readily biodegradable - pH balanced - Never tested on animals - Thoughtfully sourced ingredients
- Manufactured in zero-waste plants using 100% renewable energy - Ingredient transparency - Primary manufacturer - High Standards in Sustainability

At Earth Friendly Products, we don't just imagine a cleaner, safer future for all living things – we're building it, bottle by bottle, from the inside out. We remain a family operated business and with our CEO, Kelly Vlahakis-Hanks, at the helm, our founder's dream will continue for generations to come.

Born from Passion. Perfected by Science.
Sustainably Produced. Made with ♥.

Our ECOS Pro line is our commercial product offering. This division of our company was officially launched in 2008, replacing the Venus Laboratories product offering. Within this division, we offer over 70 formulas for specific commercial cleaning applications. These products are available in ready-to-use and concentrated formulas packaged in a variety of container sizes. We sell our ECOS Pro products through commercial distribution which includes janitorial, office, industrial, hardware and foodservice distributors.

Our goal within our commercial division is to replace toxic, unhealthy cleaning products at the end-user level through distribution. Our ECOS Pro instantly helps those commercial end-users concerned with worker safety, liability issues, indoor air quality and the overall health of our environment. We use highly sustainable plant-derived ingredients; all of our products are pH balanced, readily-biodegradable and free of dyes and phosphates. For those requiring third-party recognition we are partnered with the EPA's Safer Choice program and the USDA's BioPreferred program.

ECOS® Tip:

Unlike top-loading machines, front-loading washing machines require the door be completely airtight, once closed. After removing your clean laundry from a front-loading machine, leave the door open and allow the machine to dry out. If you close the door immediately after using, the interior of the machine is still moist and airtight, which will cause mold and mildew growth inside your machine. For best results use ECOS® and leave the door open to dry out after use.

ECOS® Laundry Detergent is the best-selling environmentally preferable laundry in the United States! Versatile and hypoallergenic, ECOS can be used in high-efficiency machines or standard machines and in hot, warm or cold water. Cleans clothes without disintegrating fabric fibers or fading colors. Available in Magnolia and Lily, or Lavender scents, and which contain a built-in fabric softener. Readily biodegradable, pH balanced formula is made using sustainable, plant-derived surfactants. Product is free of dyes; greywater and septic safe. Recognized by the EPA's Safer Choice (DfE) and USDA's BioPreferred Program.

Warning, may cause eye irritation

An effective alternative to chlorine bleach! When activated by water, the powder releases oxygen which penetrates the molecules of the staining substance, causing the stain to disappear—without the use of optical brighteners! Can be used to clean in a variety of applications; as a laundry pre-soak, laundry whitener, laundry booster; as a carpet spot remover; as a pre-soak for dishes or dishwashing booster; on bathroom grout, garage floors, and much more! Color-safe and compatible with high-efficiency machines, OxoBrite™ is effective against oil and water-based stains and effective in all temperatures. Its readily biodegradable, pH balanced formula is made using sustainable ingredients. Free of synthetic perfumes and dyes; greywater and septic safe.

Warning, may cause eye irritation

WAVE® Tip:

Over 15 states have banned phosphates; it is an aggressive fertilizer. Once in lakes, rivers or waterways it causes plant-life to grow at an explosive rates. Plant life quickly thickens across water's surface, blocking air and sunlight from the natural interplay that sustains life beneath, killing insects, fish and underwater plant life. WAVE is phosphate-free, and works better than other automatic dishwashing detergents without phosphates. Once per month, we recommend pouring a cup of white distilled vinegar into the bottom of the dishwasher, and letting it run empty on the hottest temperature. This cleans your dishwasher and keeps it smelling fresh.

No compromising on softness or absorbency! Our paper products are made from 100% recycled paper with a minimum of 80% post-consumer content. They are whitened with an oxygenating process that replaces chlorine bleaching. No perfumes, dyes, or inks.

The patented "NON-PARA" UniTab® deodorizes, cleans, descales, delimes, removes and prevents corrosion, uremic salt build up, waste build-up and keeps fixture and drain lines clear and open. The acid-stable enzymes prevent the formation of ammonia which causes urine odors. There are many products available without p-DCB (PARA) that will deodorize. Most of those products are essentially blocks of soap; they break apart fast and clog drain lines. UniTab is patented is because it deodorizes and maintains drain lines without p-DCB. The triangular version's flexibility allows it to fit in any urinal, while the round version is designed to fit over drain domes. Greywater and septic safe.
