4 Cartridge Filtration System

The Aquaclean system is designed to reduce the maintenance and cost in manufacturing pure water. Pretreatment cartridge, Reverse Osmosis and a De-Ionization. We have created the ultimate system that requires the least filter replacement than anything else on the market.

Step 1. Tap water flows into the Carbon/KDF prefilter to begin the anti-scaling process and remove chlorine in the water supply.

Step 2. The Reverse Osmosis Membranes separate water and removes 92% to 95% of total dissolved solids.

Step 3. The De-Ionization Cartridge removes the remaining total dissolved solids, producing water that is 99.99% pure.
